

RECOMMENDER SYSTEM CHALLENGE

Experimented Techniques

BEST ALGORITHM

Score Hybrid Recommender
Linear combination of scores

INPUT: URM + ICM
TUNING: 5-fold cross validation

$\text{MAP@10}_{\text{private}} = 0.107946$

$\text{MAP@10}_{\text{public}} = 0.09750$

$\text{MAP@10}_{\text{local}} = 0.07977$

Rp3Beta
51.64%

Slim
Elastic Net
33.18%

IALS
15.18%

HYPERPARAMETER TUNING

URM + ICM

Merging with vertical stack
the two matrices made a
huge difference in
recommendation quality

using scipy.sparse

`sps.vstack([URM_train, ICM_all.T])`

What made the difference
